

Operational Systems: Executive Report

What this run measured, what the result may mean, what remains uncertain, and what to test next.

EXECUTIVE REPORT

Sample report · Example data

53 **DIAGNOSTIC SCORE**
Heavy

SAMPLE CREATED	INSTRUMENT	SCOPE
September 13, 2026	Operational Systems	Operations

Main measured focus for Supplier onboarding: Work outside the standard process.

Interpretation and next steps

The participant reports that workarounds and informal fixes are what most often slows down the work or creates extra effort, and that steps or contacts outside the official process are often needed. They also report that these workarounds vary noticeably from person to person, and that a new joiner following only the written process would need substantial coaching. Useful next steps are to review one work example with its owner and to ask which written instructions exist and what they cover.

Supporting evidence: 1, 2, 3, 4. See the evidence register.

Important context from the saved result

- Not measured: Control requirements. No score is available for this dimension. Related answers may still be reported separately.

What the evidence shows

These findings distinguish scored results from what participants reported.

Asked what most often slows down the work or creates extra effort, the participant answered workarounds and informal fixes. They also report that getting work done often requires steps or contacts that are not part of the official process. When work goes off the official path, they report that the workaround itself varies noticeably from person to person rather than being consistent.

Supporting evidence: 1, 2, 3. See the evidence register.

The participant estimates that a routine work item typically requires 7 distinct approval, review, or sign-off steps before it is complete. Separately, they estimate that a typical person in this area of work uses 4 separate systems or tools to complete one unit of work. These are participant estimates rather than independent measurements.

Supporting evidence: 5, 6. See the evidence register.

The participant estimates spending 4 hours a week personally on administrative maintenance such as updating systems, following up on status, or maintaining trackers. They report that this personal time reaches the people who decide staffing and workload through informal estimates only, with no routine records. Separately, they describe the time spent on administrative work in this area of work as partly visible to the people who could reduce it.

Supporting evidence: 7, 8, 9. See the evidence register.

Reported experience

People doing the work · Operational Systems

Scope: This participant's reported work

“Participant's own experience: The shared checklist prevents missing documents. I still copy supplier details from the request into our tracking sheet and then into the vendor system. Corrections can mean updating both places. A teammate says a template makes this manageable; I find the repeated updates difficult on exception cases, not on every file. My recent examples include both routine requests and exceptions.”

A useful check is to ask which supplier details are entered more than once between the tracking sheet and the vendor system, and whether the correction steps differ on exception cases.

Supporting evidence: 10. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

Because the participant reports that off-path workarounds vary noticeably from person to person, and that someone new following only the written process would not really be able to complete the work without substantial coaching, the written process might not describe how the work is actually carried out. This could be examined by asking which written instructions exist and comparing them with what the participant says a new joiner would need to know.

Supporting evidence: 3, 4. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

The responsible owner approves the review and access to relevant material. Process or control changes need separate approval.

Risk to consider

Use authorized work examples without personal details. Stop if the review exceeds its agreed scope.

Next step 1

Ask the participant for one recent work example. With the owner, establish what need the example addressed and whether the work stayed within the official process, then check whether the official process addressed that need. Make no process change.

The participant reports that steps or contacts outside the official process are often required, that workarounds and informal fixes are what most often slows work or creates extra effort, and that the workaround varies from person to person. A single example examined with the owner gives a concrete basis for that reported pattern.

Supporting evidence: 1, 2, 3. See the evidence register.

How to judge the test

Record the need, whether the work followed the official process, and whether that process addressed the need. Leave unknowns unresolved; a defect need not be found.

Next step 2

Ask the participant what a new joiner relying only on written instructions would need to know, and which written instructions are available. If any are available, review them for that information and record any gap or uncertainty.

The participant reports that someone joining tomorrow and following only the written process would not really be able to complete the work and would need substantial coaching. A document review can show whether the identified information is present, without claiming to test how a new joiner would actually perform.

Supporting evidence: 4. See the evidence register.

How to judge the test

The note states whether the cited instructions contain the needed information, a gap was identified, or the question could not be assessed. A document review does not prove that a new joiner could complete the work.

What this report cannot establish

Responses describe one participant's view. More questions do not establish greater validity.

Missing evidence is unknown, not a favorable result.

Scores do not establish causation, predict later performance or prove realized savings.

Organizational exposure, projected recovery and return on investment are withheld for a single run. A participant's recorded time answer is not organizational savings.

Instrument design-reference ranges are not empirical sector benchmarks.

Exception-step estimates can be derived from acceptance answers. No measured exception frequency or count is supplied for AI interpretation.

Names may remain in participant text after best-effort minimization. Observations about other roles remain this participant's account.

Supporting evidence register

Each item is listed once. Numbers beside findings and actions refer to these saved values or attributed observations.

1. What most often slows down the work or creates extra effort?

Workarounds and informal fixes

2. How often does getting work done require steps or contacts that are not part of the official process?

Often

3. When work goes off the official path, is the workaround itself consistent, or does it depend on who is doing it that day?

It varies noticeably from person to person

4. If someone new joined tomorrow and followed only the written process, would they be able to complete the work?

Not really: they would need substantial coaching on how the work is actually done

5. How many distinct approval, review, or sign-off steps does a routine work item typically require before it is complete?

7

6. How many separate systems or tools does a person typically use to complete one unit of work in this area of work?

4

7. Is the time spent on administrative work in this area of work generally visible to the people who could reduce it?

Partly visible

8. About how many hours a week do you personally spend on administrative maintenance, such as updating systems, following up on status, or maintaining trackers, rather than the work itself?

4

9. How is the time you spend on administrative maintenance recorded and made available to the people who decide staffing and workload?

Informal estimates only; no routine records

10. Participant observation · Operational

Participant's own experience: The shared checklist prevents missing documents. I still copy supplier details from the request into our tracking sheet and then into the vendor system. Corrections can mean updating both places. A teammate says a template makes this manageable; I find the repeated updates difficult on exception cases, not on every file. My recent examples include both routine requests and exceptions.

Research and sector context

No newly checked public-source research is included. Any listed practice sources are dated references, not a current sector benchmark.

The reviewed sources do not supply a comparable sector distribution for this diagnostic. No sector percentile or numerical peer estimate is available.

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-13T21:08:54.536Z. Report version monderman-interpretation-20260913.38. This report preserves the evidence and research used when it was prepared.

Main measured focus for Supplier onboarding: Work outside the standard process.

DIAGNOSTIC SCORE

53
HEAVY

This workflow received a score of 53 in the heavy band. A large share of the measured burden is in one area.

PRIMARY MEASURED FOCUS	PARTICIPANT PERSPECTIVE	CHANGE OVER TIME	EVIDENCE DEPTH
Work outside the standard process The submitted answers report some off-formal-path effort alongside other burden sources. This run does not establish cause or durability.	Operational One person's recorded view	Not established by this run	Narrow, directional read Operational perspective

WHAT THIS MAY MEAN

Start with one small test of Off-formal-path execution. Measure the result, then decide whether Administrative upkeep burden needs a separate test.

02 · MEASURED CONDITION

Dimension profile

The profile keeps the total score and its contributing dimensions visible together. For condition dimensions, lower values indicate greater measured constraint. For Compensatory Effort, when shown, higher values indicate more reported extra effort.

WHERE THE MEASURED ISSUE APPEARS

PATTERN ACROSS DIMENSIONS

Concentrated

The submitted answers report some off-formal-path effort alongside other burden sources. This run does not establish cause or durability.

FINDINGS FROM SCORED ANSWERS

- The submitted answers report off-path effort or workaround behavior alongside the formal workflow; cause and effect were not established.

What the result supports and what it does not

DESIGN REFERENCE (NOT A PEER BENCHMARK) This workflow sits below the instrument's expert-authored professional services design reference. This reference comes from the instrument's design, not customer or industry data. It does not change the score. Use the recorded answers, measured dimensions, and repeated measurements when deciding what to do.	TRADEOFF TO CONSIDER The submitted answers may pair acceptable output with administrative effort. This run does not establish a relationship between them. Record the work, the control it supports, and the operating result separately in any test.
RELATIONSHIP BETWEEN THE MEASURED DIMENSIONS Movement is weak while governance weight is heavy. Those measured conditions co-occur.	CHANGE OVER TIME Not established by this run

04 · EVIDENCE IN THIS RUN

What this result is based on

EVIDENCE DEPTH	MEASURED DIMENSIONS	PERSPECTIVE
Narrow, directional read Scope of this single run	5 of 6 Dimensions represented	Operational Notes do not change the score

OPERATIONAL

The shared checklist prevents missing documents. I still copy supplier details from the request into our tracking sheet and then into the vendor system. Corrections can mean updating both places. A teammate says a template makes this manageable; I find the repeated updates difficult on exception cases, not on every file. My recent examples include both routine requests and exceptions.

WHAT TO WATCH NEXT

- No major contradiction signals surfaced in this run.

Measured priorities

01	FIRST REVIEW Off-formal-path execution	84
02	NEXT REVIEW Administrative upkeep burden	30
03	MONITOR Process density	28

How this report was produced

The score and dimension values come from the submitted answers. Participant notes, when present, are shown separately and do not change the score. One run does not establish organizational savings or recoverable time. The design reference was set when the instrument was designed; it is not a comparison with customer or industry data.

INTERPRETATION BOUNDARY

This report is based on one participant's answers for the stated scope. It suggests issues to investigate and changes to test. It does not show how common these conditions are, prove their causes or predict performance. Organizational time and money estimates require separate operational measurements beyond a single run.
