54 INSTITUTIONAL PERFORMANCE MEDIAN DIAGNOSTIC SCORE

Mixed observed condition

Included responses only evidence

SAMPLE CREATED	PRODUCT	RUNS
September 24, 2026	Response comparison	15
LENSES	**EVIDENCE**	
1	Response comparison	

15 submitted Institutional Performance runs produce a median score of 54, with an observed range of 36–54. The observed runs are closely aligned (sample sd 7.5, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. A combined modeled time and labor-cost estimate is not published: Diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

Financial benefit assessment

Financial estimates become available with enough campaign data for Depth Synthesis or Cross-Lens Synthesis.

Each analysis must meet its participation and coverage requirements. Estimates also need the relevant working-time, pay and spending inputs.

Continue gathering responses and check readiness in Workspace Analysis.

Interpretation and next steps

Within the submitted runs for Institutional Performance, the saved figures form a response comparison for this sample rather than a settled reading. The median score is 54, the overall mean 50.4 matches each role group mean (50.4, 50.4, 50.4), supplied scores run from 36 to 54, and the saved variation label reads Scores are closely aligned across 15 submitted runs that need not be distinct people. These figures are not a peer benchmark, and they identify no cause. An eligible next step is to read that variation label with the score range and record whether a closer review of these selected runs is warranted.

Supporting evidence: 1, 2, 3, 4, 5, 6, 7, 8, 9. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

For Institutional Performance, the saved figures are a response comparison within this sample, drawn from 15 submitted runs that are not necessarily distinct people. The median score is 54 and the mean is 50.4. Supplied scores run from a lowest of 36 to a highest of 54, and the saved variation label reads Scores are closely aligned.

Supporting evidence: 1, 2, 3, 4, 5, 6. See the evidence register.

Included participants total 15 within a sponsor declared eligible population of 30 for this exact work and period. Those figures count account or invitation identities rather than independently verified people, and taking part does not show that the saved results hold for everyone in the declared scope.

Supporting evidence: 10, 11. See the evidence register.

> **Reported experience**

> People doing the work · Institutional Performance
>
> Scope: Supplier onboarding across the participating operating team
>
> “Participant's own experience: The team usually completes supplier onboarding, and colleagues help when work builds up. Difficult exceptions can require extra follow-up to keep commitments. Some people consider this ordinary teamwork; others say it happens too often. I can describe the cases I handled, but not the performance of the whole organization. One exception depended on a familiar colleague explaining an earlier decision; that person may not always be available.”

Verification task: ask the owner of supplier onboarding records which records, if any, cover the exception this participant describes, and review them only if they exist.

Supporting evidence: 12. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

One manager reports that the team relies on familiar people to resolve difficult supplier exceptions and says they do not know whether that extra effort is sustainable, and describes one exception that depended on a familiar colleague explaining an earlier decision, a person who may not always be available. It is possible that some difficult exceptions are settled through knowledge held by particular colleagues rather than through the recorded route. This is only a possibility and says nothing about how often it happens. Separately, a person doing the work says colleagues help when work builds up, with some people treating that as ordinary teamwork and others saying it happens too often. Practical check: ask whether any record shows such an exception occurred and, only if one did, who was involved.

Supporting evidence: 12, 13. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

Use only the selected runs and the saved comparison details in this report.

Risk to consider

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

Next step 1

Read the saved variation label together with the lowest and highest supplied scores for these selected runs, and write down whether a closer review is warranted and why.

The label and the score range describe only these submitted runs, which need not come from distinct people, and they identify no cause. The National Institute of Standards and Technology, in About the Baldrige Excellence Framework, suggests looking at leadership, strategy, customers, measurement, workforce, operations and results together when reviewing organizational performance; that guidance is general, is not matched to this sector and prescribes nothing for this scope.

Supporting evidence: 14, 15, 16, 1, 4, 5, 6. See the evidence register. Practice sources: 1. See Research and sector context.

How to judge the change

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

Next step 2

Set the saved role group means for Institutional Performance side by side as a sample comparison of these selected runs, not as a ranking of roles.

The saved means for Managers, People doing the work and Senior leaders are equal in these runs, and each group rests on the same number of submitted runs, which need not be distinct people. Presenting them together shows what this sample contains without suggesting that one role scores higher or that the pattern holds elsewhere.

Supporting evidence: 14, 15, 16, 17, 7, 18, 8, 19, 9. See the evidence register.

How to judge the change

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across question-set versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and question-set version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

12. Participant observation · Operational

Participant's own experience: The team usually completes supplier onboarding, and colleagues help when work builds up. Difficult exceptions can require extra follow-up to keep commitments. Some people consider this ordinary teamwork; others say it happens too often. I can describe the cases I handled, but not the performance of the whole organization. One exception depended on a familiar colleague explaining an earlier decision; that person may not always be available.

13. Participant observation · Managerial

Participant's own experience: The team meets many commitments and responds well to urgent requests. We also rely on familiar people to resolve difficult supplier exceptions. I do not know whether that extra effort is sustainable. I would compare completion records with staff accounts instead of assuming every late file has the same cause. One exception depended on a familiar colleague explaining an earlier decision; that person may not always be available.

Research and sector context

No newly checked public-source research is included. Any listed practice sources are dated references, not a current sector benchmark.

The reviewed sources do not supply a comparable sector distribution for this diagnostic. No sector percentile or numerical peer estimate is available.

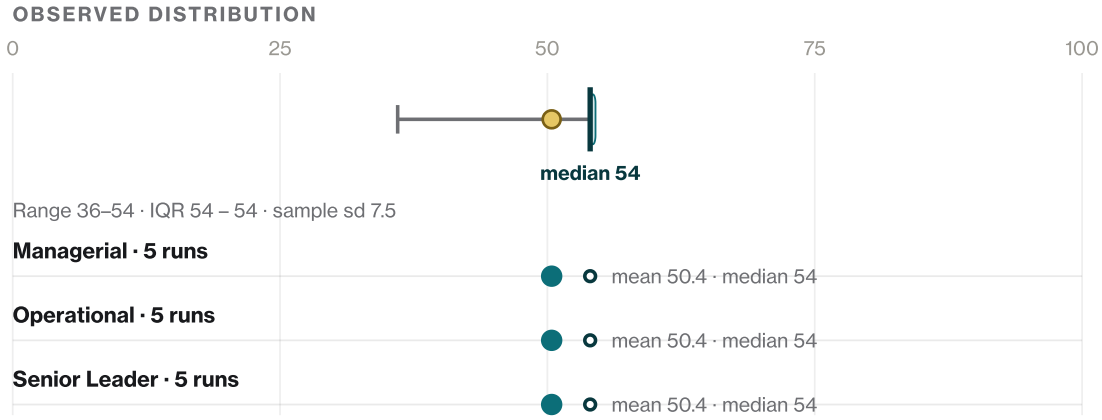

1. About the Baldrige Excellence Framework · National Institute of Standards and Technology · Checked 2026-09-08

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-24T22:57:25.398Z. Report version monderman-interpretation-20260924.70. This report preserves the evidence and research used when it was prepared.

DISTRIBUTION AT A GLANCE

Box = interquartile range; dark line = median; gold dot = mean. Results by participant perspective describe the submitted groups; they do not change how the Median Diagnostic Score is calculated.

01 · COMPARISON READ

Observed same-instrument pattern

This result summarizes 15 submitted runs from Institutional Performance. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

MEDIAN DIAGNOSTIC SCORE	INTERQUARTILE RANGE	PERSPECTIVE DIFFERENCE	COVERAGE
54	**54 – 54**	**Not established**	**15 runs**
Response comparison	Middle 50% of eligible runs	No published difference between participant perspectives	Response comparison

AGREEMENT VERSUS DIVERGENCE

The observed runs are closely aligned (sample sd 7.5, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

MEAN AND MEDIAN

3.6 pt mean–median gap

Consider the difference between the mean and median when reading the overall result.

2. Agreement, divergence, and coverage

Institutional Performance

Eligible runs	15
Median score	54
Mean score	50.4
Observed range	36 – 54
Interquartile range	54 – 54
Sample standard deviation	7.5
Outlier status	Not classified from aggregate source data

Aligned. The observed runs are closely aligned (sample sd 7.5, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

Results by participant perspective

Managerial · 5 runs	Mean 50.4 · median 54
Operational · 5 runs	Mean 50.4 · median 54
Senior Leader · 5 runs	Mean 50.4 · median 54

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

3. Response comparison

Observed same-instrument pattern

Response Comparison · Within Lens Synthesis

This result summarizes 15 submitted runs from Institutional Performance. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

Response comparison: 15 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic response comparison. Its central score, spread, and segment differences describe the 15 submitted runs. The observed runs are closely aligned (sample sd 7.5, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this response comparison to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

Score basis. Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

4. Agreements and differences

Recurring signals

Aligned observed set

Institutional Performance is closely aligned across 15 submitted runs. This describes the submitted scores, not verified agreement between distinct people. Population representativeness also requires a documented sampling frame and verified coverage of distinct people.

Institutional Performance

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

5. Results by participant perspective

Operational

Results from the Operational perspective: Institutional Performance: 5 recorded participants, mean 50.4, median 54. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Managerial

Results from the Managerial perspective: Institutional Performance: 5 recorded participants, mean 50.4, median 54. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Senior Leader

Results from the Senior Leader perspective: Institutional Performance: 5 recorded participants, mean 50.4, median 54. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

6. Evidence in this run

> **Response comparison.** These responses can be compared within the recorded campaign scope. The remaining campaign readiness checks must be resolved before broader conclusions.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

Response comparison

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTION-SET AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period. Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

7. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published AAPOR guidance. Monderman defines its own eligibility rules; AAPOR has not validated them.

> **Organizational implication.** The read shows how the recorded participant scores cluster and vary within one diagnostic. It does not establish why this condition occurs or how it interacts with the other Monderman lenses.

> **INTERPRETATION BOUNDARY**
