MONDERMAN. Q²-SODI™ · RESPONSE COMPARISON

# Operational Systems response comparison

What the included participants reported, where their views differ and what to investigate next. This is not a population conclusion or an unlocked Synthesis.

EXECUTIVE REPORT

Sample report · Example data

**53** OPERATIONAL SYSTEMS MEDIAN DIAGNOSTIC SCORE

Material observed strain

Included responses only evidence

| SAMPLE CREATED | PRODUCT | RUNS |
|---|---|---|
| September 24, 2026 | Response comparison | 15 |
| **LENSES** | **EVIDENCE** | |
| 1 | Response comparison | |

15 submitted Operational Systems runs produce a median score of 53, with an observed range of 53–69. The observed runs are closely aligned (sample sd 6.1, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. A combined modeled time and labor-cost estimate is not published: Diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

**INTERPRETATION BOUNDARY**

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

# Financial benefit assessment

Financial estimates become available with enough campaign data for Depth Synthesis or Cross-Lens Synthesis.

Each analysis must meet its participation and coverage requirements. Estimates also need the relevant working-time, pay and spending inputs.

Continue gathering responses and check readiness in Workspace Analysis.

## Interpretation and next steps

Read as a response comparison within these submitted runs for Operational Systems, the median score is 53 across 15 runs, spanning 53 to 69, with the saved variation status Scores are closely aligned. An eligible next step is to review that variation label together with the score range before deciding whether a closer review is warranted, keeping any follow-up limited to these selected runs.

Supporting evidence: 1, 2, 3, 4, 5. See the evidence register.

## What the evidence shows

These findings distinguish scored results from what participants reported.

Treating the saved Operational Systems figures as a response comparison within the submitted sample, the median score is 53 across 15 submitted runs, the lowest supplied score is 53 and the highest is 69, with the saved variation status recorded as Scores are closely aligned. These figures are not a peer benchmark, and submitted runs need not be distinct people.

Supporting evidence: 1, 2, 3, 4, 5. See the evidence register.

Within the same submitted runs, the manager group mean is 55.8 from 5 runs and the senior leader group mean is 55.8 from 5 runs; those two means are equal. The mean for people doing the work is 56.2 from 5 runs, which is higher than both. This is a sample comparison, not a ranking of roles, and it identifies no cause.

Supporting evidence: 6, 7, 8, 9, 10, 11. See the evidence register.

People doing the work, asked how many hours per week a typical person in this area of work spends on status reporting, recurring updates or administrative documentation, gave a median reported estimate of 3 across 5 recorded answers to that exact question. These estimates are reported by respondents, not verified measurements, and counts describe answers rather than prevalence.

Supporting evidence: 12, 13. See the evidence register.

---

Managers, asked how many distinct approval, review or sign-off steps a routine work item typically requires in this area of work, gave a median reported estimate of 7 across 5 recorded answers to that exact question. This question stands on its own and should not be read together with the separately worded questions put to other roles.

Supporting evidence: 14, 15. See the evidence register.

---

## What may explain it

Possible explanations to investigate, not established causes.

One operational participant reports copying supplier details from the request into a tracking sheet and then into the vendor system, and says corrections can mean updating both places, with the repeated updates difficult on exception cases rather than on every file. That duplicated entry might possibly account for part of the documentation time these respondents describe. A senior leader participant separately states they have not measured that effort. A practical check is to ask what records exist showing corrections applied in both the tracker and the vendor record, and to review such records only if they are available.

Supporting evidence: 16, 17. See the evidence register.

---

## Practical next steps

Start with these practical checks or focused changes.

### For all next steps

**Before trying it**

Use only the selected runs and the saved comparison details in this report.

**Risk to consider**

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

### Next step 1

**Review the saved variation label and score range together before deciding whether further review is useful. They describe these selected runs, not the wider organization.**

The saved scores for this diagnostic sit within a narrow supplied range and carry a recorded variation status, so reading the label and the range together is the plain way to judge whether a closer look at these selected runs is worthwhile.

Supporting evidence: 18, 19, 20, 1, 3, 4, 5. See the evidence register.

**How to judge the change**

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

### Next step 2

**Compare the saved role-group means within this diagnostic and these selected runs. Present them as a sample comparison, not a ranking of roles.**

Two of the saved role-group means are equal while the third differs, so presenting the means with their submitted-run counts keeps that pattern visible without treating it as a cause or a general result.

Supporting evidence: 18, 19, 20, 6, 7, 8, 9, 10, 11. See the evidence register.

#### How to judge the change

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

## What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across question-set versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and question-set version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

7

**16. Participant observation · Operational**

Participant's own experience: The shared checklist prevents missing documents. I still copy supplier details from the request into our tracking sheet and then into the vendor system. Corrections can mean updating both places. A teammate says a template makes this manageable; I find the repeated updates difficult on exception cases, not on every file. On a recent renewal, the existing template let me complete the record without copying the details again.

**17. Participant observation · Senior Leader**

Participant's own experience: The standard process gives me a useful status view and keeps required checks visible. Staff have mentioned repeated entry between the tracker and vendor system. I have not measured that effort, and I would not remove a control without knowing what it protects. My view of the routine work is more positive than some operational accounts. On a recent renewal, the existing template let me complete the record without copying the details again.

### How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-24T22:34:16.418Z. Report version monderman-interpretation-20260924.70. This report preserves the evidence and research used when it was prepared.

## DISTRIBUTION AT A GLANCE

Box = interquartile range; dark line = median; gold dot = mean. Results by participant perspective describe the submitted groups; they do not change how the Median Diagnostic Score is calculated.

01 · COMPARISON READ

# Observed same-instrument pattern

This result summarizes 15 submitted runs from Operational Systems. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

| MEDIAN DIAGNOSTIC SCORE | INTERQUARTILE RANGE | PERSPECTIVE DIFFERENCE | COVERAGE |
|---|---|---|---|
| **53** | **53 – 53** | **Not established** | **15 runs** |
| Response comparison | Middle 50% of eligible runs | No published difference between participant perspectives | Response comparison |

### AGREEMENT VERSUS DIVERGENCE

The observed runs are closely aligned (sample sd 6.1, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

### MEAN AND MEDIAN

**2.9 pt mean–median gap**

Consider the difference between the mean and median when reading the overall result.

## 2. Agreement, divergence, and coverage

### Operational Systems

| | |
|---|---|
| Eligible runs | 15 |
| Median score | 53 |
| Mean score | 55.9 |
| Observed range | 53 – 69 |
| Interquartile range | 53 – 53 |
| Sample standard deviation | 6.1 |
| Outlier status | Not classified from aggregate source data |

> **Aligned.** The observed runs are closely aligned (sample sd 6.1, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

### Results by participant perspective

| | |
|---|---|
| Managerial · 5 runs | Mean 55.8 · median 53 |
| Operational · 5 runs | Mean 56.2 · median 53 |
| Senior Leader · 5 runs | Mean 55.8 · median 53 |

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

## 3. Response comparison

### Observed same-instrument pattern

Response Comparison · Within Lens Synthesis

This result summarizes 15 submitted runs from Operational Systems. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

Response comparison: 15 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic response comparison. Its central score, spread, and segment differences describe the 15 submitted runs. The observed runs are closely aligned (sample sd 6.1, IQR 0). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this response comparison to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

**Score basis.** Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

## 4. Agreements and differences

### Recurring signals

#### Aligned observed set

Operational Systems is closely aligned across 15 submitted runs. This describes the submitted scores, not verified agreement between distinct people. Population representativeness also requires a documented sampling frame and verified coverage of distinct people.

Operational Systems

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

## 5. Results by participant perspective

#### Operational

Results from the Operational perspective: Operational Systems: 5 recorded participants, mean 56.2, median 53. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

#### Managerial

Results from the Managerial perspective: Operational Systems: 5 recorded participants, mean 55.8, median 53. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

### Senior Leader

Results from the Senior Leader perspective: Operational Systems: 5 recorded participants, mean 55.8, median 53. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

## 6. Evidence in this run

> **Response comparison.** These responses can be compared within the recorded campaign scope. The remaining campaign readiness checks must be resolved before broader conclusions.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

EVIDENCE STRENGTH

Response comparison

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTION-SET AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period. Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

## 7. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published AAPOR guidance. Monderman defines its own eligibility rules; AAPOR has not validated them.

> **Organizational implication.** The read shows how the recorded participant scores cluster and vary within one diagnostic. It does not establish why this condition occurs or how it interacts with the other Monderman lenses.

> **INTERPRETATION BOUNDARY**
>
> These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.
