52 **STRUCTURAL CLARITY MEDIAN DIAGNOSTIC SCORE**
Material observed strain

Campaign checks recorded evidence

SAMPLE CREATED	PRODUCT	RUNS	LENSES	EVIDENCE
September 14, 2026	Depth Synthesis	27	1	Campaign readiness checks satisfied

27 submitted Structural Clarity runs produce a median score of 52, with an observed range of 49–74. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. The decision brief that follows includes a separate operational planning scenario, based on recorded activity and stated change assumptions. Diagnostic scores do not calculate its time or financial values.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

OPERATIONAL VALUE

Decision brief

Supplier onboarding across the participating operating team · 30 people · 12 months

Potential staff time · central case

3,496 hours

Staff capacity value · central case

\$364,989

Value of staff time, not cash savings.

In the central case, potential capacity and cash value exceeds total cost by \$310,389. This includes staff-time value, not a cash return.

No direct cash saving assumed. The opportunity in this scenario is staff capacity that can be used for other work.

Three planning cases

Over the planning period	Low	Central	High
Potential staff hours freed	626	3,496	5,342
Staff capacity value	\$64,962	\$364,989	\$556,778
Direct cash saving assumed	\$0	\$0	\$0
Cash investment, including subscription	\$41,600	\$36,600	\$31,600
Total cost, including internal staff time	\$65,600	\$54,600	\$43,600
Net cash effect	-\$41,600	-\$36,600	-\$31,600
Net capacity and cash value	-\$638	\$310,389	\$513,178

Low pairs lower benefits with higher costs; high pairs higher benefits with lower costs. Central uses the central inputs. These are assumption-based cases, not probabilities or a forecast.

Summary figures are rounded. Exact values, activity records and assumptions remain in the operational planning scenario below. Diagnostic scores do not calculate these financial values.

Interpretation and next steps

The published synthesis score for these selected runs is 52, and all 9 recorded answers from people doing the work said that, when they need something from another team, ownership is “Often unclear: I ask two or three people first”. Next step: test a shared decision-and-handoff agreement in the affected team, after checking that pattern against recent work records.

Supporting evidence: 1, 2, 3. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

Within these selected Structural Clarity runs, the senior leader group mean of 74 sits above the manager group mean of 52 and the mean of 49 for people doing the work. Each of those group means rests on 9, 9 and 9 submitted runs respectively, out of 27 submitted runs for this diagnostic, and submitted runs need not come from distinct people.

Supporting evidence: 4, 5, 6, 7, 8, 9, 10. See the evidence register.

The saved variation status for these runs is recorded as Two separated score groups, with supplied scores ranging from 49 at the low end to 74 at the high end. This describes how the submitted scores are distributed and does not identify a cause or a position against other organizations.

Supporting evidence: 11, 12, 13. See the evidence register.

Asked whether it is clear who owns something they need from another team, all 9 recorded answers from people doing the work were “Often unclear: I ask two or three people first”. To a differently worded senior leader question about telling from the formal structure who is responsible, all 9 recorded answers were “Usually visible with occasional exceptions”. The two questions are not worded alike, so these are separate readings rather than a like-for-like comparison.

Supporting evidence: 2, 3, 14, 15. See the evidence register.

Reported experience

Managers · Structural Clarity

Scope: Supplier onboarding across the participating operating team

“Participant's own experience: Routine suppliers usually have a clear owner and the checklist is followed. Exceptions are less clear: the requesting manager expects procurement to decide, while procurement sometimes sends the decision back. Some team members say ownership is clear in practice, so I would compare actual exception cases before changing responsibilities. My recent examples include both routine requests and exceptions.”

Ask this participant to list the specific recent cases they have in mind and to record, for each one, which role made the final decision and when.

Supporting evidence: 16. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

One operational account reports that when a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide, and that this participant's experience is mainly routine requests. A senior leader account reports hearing different accounts about who decides exceptions, with their own experience mainly the escalated ones. Together these reported conditions could mean that contested ownership sits in exception handling rather than routine onboarding. A practical check is to pull a set of recent exception cases and record who made the final decision in each.

Supporting evidence: 17, 18. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

Use only the selected runs and the saved comparison details in this report.

Risk to consider

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

Next step 1

Read the saved variation status together with the lowest and highest supplied scores for these selected runs, then record whether a closer review is worth doing.

Questionnaire compatibility is Verified, work scope compatibility is Common work scope recorded and the time window is Aligned time window, so the spread can be read as saved; it still explains nothing about the wider organization.

Supporting evidence: 19, 20, 21, 4, 11, 12, 13. See the evidence register.

How to judge the test

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

Next step 2

Present the saved role-group means for this diagnostic beside their submitted-run counts as a sample comparison, not a ranking of roles.

The senior leader mean stands apart from the other two role means in these runs, and showing the counts alongside keeps the comparison tied to the submitted sample.

Supporting evidence: 19, 20, 21, 5, 6, 7, 8, 9, 10. See the evidence register.

How to judge the test

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

Three levels of change

These are alternatives, not a sequence or a presumption that a larger change is better. Check each option's prerequisites and risks.

Limited change

Clarify who decides, who contributes and who carries out one recurring piece of work.

All 9 recorded manager answers about how clear it is who can decide what were “Depends on the situation and who applies pressure”, so a single recurring piece of work is a narrow place to set out those roles.

Supporting evidence: 1, 22, 23, 24, 25. See the evidence register.

Before trying it

Check the reported condition against specific work examples and confirm who owns the test.

Risk to consider

A local change may move work or risk elsewhere. Check its effects on the people receiving the work.

How to judge the test

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

Moderate change

Test a shared decision-and-handoff agreement in the affected team.

All 9 recorded answers from people doing the work about handoff points were “Known informally but not formally stated”, which is what a written decision-and-handoff agreement would put on paper for one team.

Supporting evidence: 1, 22, 23, 26, 27. See the evidence register.

Before trying it

Confirm the reported problem in work records, agree the change with affected roles and retain required controls.

Risk to consider

A local change may move work or risk elsewhere. Check its effects on the people receiving the work.

How to judge the test

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

Structural change

Review the formal allocation of authority and accountability across the affected units.

All 9 recorded manager answers on where unclear arrangements start were “Accountability: unclear who answers when things go wrong”, the kind of selection a review of formal authority and accountability would examine across units.

Supporting evidence: 1, 22, 23, 28, 29. See the evidence register.

Before trying it

Confirm the problem across affected roles and work records. Obtain the appropriate authority, assess risks and begin with a reversible test.

Risk to consider

Changing authority or controls can create new gaps. Do not implement an organization-wide change from diagnostic responses alone.

How to judge the test

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

RECOMMENDED PATH

Test a shared decision-and-handoff agreement in the affected team.

It stays within one team while addressing the handoff wording chosen in all 9 recorded answers from people doing the work, which was “Known informally but not formally stated”.

Supporting evidence: 1, 22, 23, 26, 27. See the evidence register.

This campaign met the evidence checks for a recommended path, with operating evidence and safeguards recorded by an authorized reviewer.

What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across questionnaire versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and questionnaire version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

Supporting evidence register

Each item is listed once. Numbers beside findings and actions refer to these saved values or attributed observations.

Two separated score groups

Recorded answers: Structural Clarity / Senior leaders · 30-minute depth · Questionnaire 1.3.0 · 9 recorded answers · 9 matching saved reports

15. Can people usually tell who is responsible for work from the formal structure, or do they have to ask, infer it, or know who to contact? · Recorded selection: Usually visible with occasional exceptions

9

17. Participant observation · Operational

Participant's own experience: The onboarding checklist is useful and I know who prepares each file. When a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide. I ask both before proceeding. A colleague says the written responsibility table is enough; that has not resolved the exceptions I have handled. My experience is mainly with routine requests.

12. Structural Clarity: highest supplied score

74

Recorded answers: Structural Clarity / Senior leaders · 30-minute depth · Questionnaire 1.3.0 · 9 recorded answers · 9 matching saved reports

14. Can people usually tell who is responsible for work from the formal structure, or do they have to ask, infer it, or know who to contact? · Recorded answers

9

16. Participant observation · Managerial

Participant's own experience: Routine suppliers usually have a clear owner and the checklist is followed. Exceptions are less clear: the requesting manager expects procurement to decide, while procurement sometimes sends the decision back. Some team members say ownership is clear in practice, so I would compare actual exception cases before changing responsibilities. My recent examples include both routine requests and exceptions.

18. Participant observation · Senior Leader

Participant's own experience: I understand which function owns supplier approval, and routine work normally reaches the right owner. I hear different accounts about who decides exceptions. The formal responsibility table looks clear to me, but I have not checked whether people use it in the same way during a difficult case. My experience is mainly with the exceptions that are escalated.

2. Agreement, divergence, and coverage

Structural Clarity

Eligible runs	27
Median score	52
Mean score	58.3
Observed range	49 – 74
Interquartile range	49 – 74
Sample standard deviation	11.4
Outlier status	Not classified from aggregate source data

Divided. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used.

Results by participant perspective

Managerial · 9 runs	Mean 52 · median 52
Operational · 9 runs	Mean 49 · median 49
Senior Leader · 9 runs	Mean 74 · median 74

Difference between perspectives: The observed segment means differ by 25 points. This may reflect different local conditions, vantage effects, or sample composition and should be investigated before being treated as one shared condition.

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

3. Executive synthesis

Divided observed respondent pattern

Campaign Readiness Checks Satisfied · Distribution Finding

Across 27 submitted Structural Clarity runs, the score distribution separates into two materially different groups. The synthesis does not infer why. Locate the split by role, unit, pathway, or response coverage before one organization-wide action is chosen.

Campaign readiness checks satisfied: 27 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic Depth Synthesis. Its central score, spread, and segment differences describe the 27 submitted runs. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this Depth Synthesis to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

Score basis. Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

4. Agreements and differences

Recurring signals

Divided observed set

Structural Clarity separates into two materially different score groups. The split should be located by unit, role, or operating context before the mean is treated as one shared condition.

Structural Clarity

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

Differences to keep visible

- Structural Clarity contains two materially separated score groups (67% lower and 33% higher). The division should be mapped to units, roles, or pathways before the overall median is used as one shared organizational condition.
 - The observed segment means differ by 25 points. This may reflect different local conditions, vantage effects, or sample composition and should be investigated before being treated as one shared condition.
-

5. Operational planning scenario

Supplier onboarding work redesign scenario

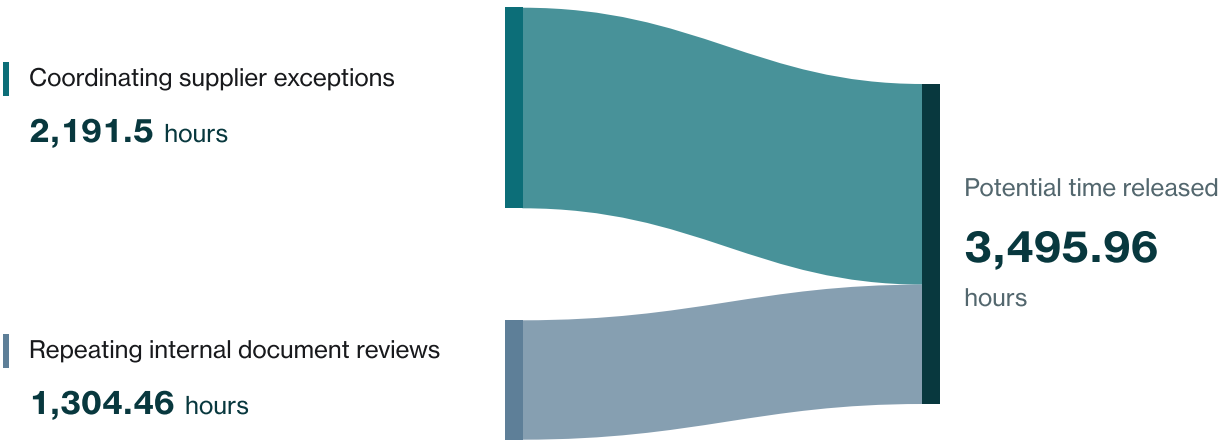

Planning scenario from the operational inputs and assumptions shown. Not measured savings or a forecast. Capacity value is not cash savings.

Cost ranges below run from lower to higher cost. Net results pair lower benefits with higher costs for the low outcome, central inputs for the central outcome, and higher benefits with lower costs for the high outcome.

Scope	Supplier onboarding across the participating operating team
People covered by operational records	30
Measured period	August 16, 2026 to September 13, 2026
Planning period	12 months

Where time could be released

Central case over 12 months. Ribbon widths show potential hours released by each distinct activity, not diagnostic scores.

\$364,989.11 potential staff capacity value in the central case. Dollar values use the stated labor costs and are shown separately from hours; they are not cash savings.

Illustrative example. Directional estimates based on reported operating data and the assumptions shown. Figures indicate potential time and capacity gains, not measured savings.

Potential hours released by activity

Distinct activity	Low	Central	High
Coordinating supplier exceptions	365.25	2,191.5	3,287.25
Repeating internal document reviews	260.89	1,304.46	2,054.53
Total hours	626.14	3,495.96	5,341.78

One scope, distinct activities. The same work is counted once, even when several diagnostic lenses identify it. Low, central and high are assumption-based cases, not confidence intervals. Small total differences can result from rounding.

Potential time freed

hours

Low scenario

626.14

Central scenario

--------------	------------

Source reference	Illustrative 28-day activity log: repeated review work, excluding exception coordination
------------------	--

Loaded hourly labor cost	\$95
--------------------------	------

Basis for proposed change	Illustrative proposal: retain required checks and use a common completeness checklist before review. Reduction and adoption are assumptions to test.
---------------------------	---

Cash avoidance basis	No non-labor expenditure reduction is assumed.
----------------------	--

Assumed time reduction

Low scenario	Central scenario	High scenario
10%	25%	35%

Assumed adoption

Low scenario	Central scenario	High scenario
40%	80%	90%

Non-labor expenditure avoided over the planning period

Low scenario	Central scenario	High scenario
\$0	\$0	\$0

Implementation and subscription costs

Incremental implementation cash

Low scenario	Central scenario	High scenario
\$10,000	\$15,000	\$20,000

Internal staff-time implementation value

Low scenario

\$12,000

Central scenario

\$18,000

High scenario

\$24,000

Subscription allocation: \$21,600

Illustrative 12-month Signal allocation: \$21,600 paid annually in advance (\$24,000 if paid in installments). External support is incremental cash; internal staff time is separate capacity cost. No costs are counted twice. This is an example assumption, not a customer quotation.

Campaign participation checks are satisfied. They do not establish financial accuracy.

Ranges are user-specified sensitivity scenarios, not probabilities or confidence intervals.

Time freed is potential capacity; it is not automatically a payroll or cash reduction.

The planning period assumes the measured activity volume continues. Review seasonality and expected changes.

Use actual implementation and operating results to update the scenario; a favorable calculation is not proof of effectiveness.

6. Results by participant perspective

Operational

Results from the Operational perspective: Structural Clarity: 9 recorded participants, mean 49, median 49. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

Managerial

Results from the Managerial perspective: Structural Clarity: 9 recorded participants, mean 52, median 52. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

Senior Leader

Results from the Senior Leader perspective: Structural Clarity: 9 recorded participants, mean 74, median 74. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

7. Evidence in this run

Campaign readiness checks satisfied. The declared scope, recorded participant identities, instrument versions, group coverage and bounded missing-score checks meet the current campaign policy. This does not establish measurement validity, a cause or an effective intervention.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

EVIDENCE STRENGTH

Campaign readiness checks satisfied

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTIONNAIRE AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period.
Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

8. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published [AAPOR guidance](#). Monderman defines its own eligibility rules; AAPOR has not validated them.

The separate operational scenario documents scope, inputs, assumptions and costs, informed by selected practices in [GAO's Cost Estimating and Assessment Guide](#). Customer-defined low, central and high cases compare combined assumptions. This is not GAO approval, full compliance or a validated savings method.

Organizational implication. The mean is not the decision-ready finding. The organization should first identify where the lower and higher score groups sit and whether they reflect different units, roles, pathways, or response coverage.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.
