LENSES	**EVIDENCE**	
1	Response comparison	

15 submitted Decision Velocity runs produce a median score of 62, with an observed range of 61–77. The observed runs are closely aligned (sample sd 6.3, IQR 1.5). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. A combined modeled time and labor-cost estimate is not published: Diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

Financial benefit assessment

Financial estimates become available with enough campaign data for Depth Synthesis or Cross-Lens Synthesis.

Each analysis must meet its participation and coverage requirements. Estimates also need the relevant working-time, pay and spending inputs.

Continue gathering responses and check readiness in Workspace Analysis.

Interpretation and next steps

Within the selected Decision Velocity runs, the saved role group means are 64.2 for managers from 5 submitted runs, 65 for people doing the work from 5 submitted runs and 65.8 for senior leaders from 5 submitted runs, so the means differ, with managers lowest and senior leaders highest. The saved results do not say how large those differences are or what produced them. An eligible next step is to present those saved means with their submitted run counts as a sample comparison of these runs rather than a ranking of roles.

Supporting evidence: 1, 2, 3, 4, 5, 6. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

Within the Decision Velocity runs in this submitted sample, the median score is 62 and the mean score is 65, with supplied scores running from 61 to 77 across 15 submitted runs. The saved variation label for these scores is recorded as Scores are closely aligned. This is a response comparison inside the selected runs only. These figures are not a peer benchmark.

Supporting evidence: 7, 8, 9, 10, 11, 12. See the evidence register.

Across the same selected Decision Velocity runs, the saved mean score for managers is 64.2 from 5 submitted runs, for people doing the work 65 from 5 submitted runs, and for senior leaders 65.8 from 5 submitted runs. Managers hold the lowest of these means and senior leaders the highest. The saved results do not classify how large those differences are, and submitted runs are not proof of distinct people.

Supporting evidence: 1, 2, 3, 4, 5, 6. See the evidence register.

Managers, people doing the work and senior leaders were each asked, on average, how many calendar days pass from when a decision request first enters this process to the final decision, counting time waiting at intake, in queues and between reviews rather than only active working time. The median reported estimate is 14 for managers from 5 recorded answers, 14 for people doing the work from 5 recorded answers, and 14 for senior leaders from 5 recorded answers. These medians are equal, and they are reported estimates rather than verified measurements.

Supporting evidence: 13, 14, 15, 16, 17, 18. See the evidence register.

>
> Scope: Supplier onboarding across the participating operating team
>
> “Participant's own experience: Straightforward suppliers can move quickly once the documents are complete. For an exception I sometimes send the same file to several approvers and wait for replies in different places. Others on the team say a direct conversation is enough. I want to check when that shorter route is actually authorized. A complete renewal request received a decision during the regular review, and I did not need an extra conversation.”

Ask what records exist showing which approver a supplier exception was sent to and when each reply arrived, and review those records only if they are available.

Supporting evidence: 19. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

A participant in a managerial role reports that exceptions may wait between meetings and that they sometimes seek confirmation from both procurement and the requesting manager. Needing confirmation from both parties could be one reason an exception request waits, although the same participant also reports having seen urgent decisions completed promptly and would separate urgent from routine examples first. To check, ask whether any exception waited in a recent period, and only where a wait occurred ask which reply or decision was awaited, using case records if such records exist.

Supporting evidence: 20. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

Use only the selected runs and the saved comparison details in this report.

Risk to consider

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

Next step 1

Read the saved variation label together with the lowest and highest supplied scores for this diagnostic, then write down whether a closer look at these selected runs is worthwhile and what would be examined.

The submitted runs carry a score range from the lowest to the highest supplied value alongside a saved variation label, and the question set, work scope and time window are recorded as compatible. Those summaries describe the pattern without stating a cause, so a short written judgement keeps any follow-up tied to the saved results for these runs.

Supporting evidence: 21, 22, 23, 7, 10, 11, 12. See the evidence register.

How to judge the change

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

Next step 2

Set out the saved mean score and submitted run count for each role group in this diagnostic side by side, presented as a sample comparison of the selected runs rather than a ranking of roles.

The saved means for managers, people doing the work and senior leaders are not identical, and each rests on a small number of submitted runs recorded under compatible question-set, work scope and time window details. Presenting them together shows the comparison plainly without treating any group as better placed or assigning a cause.

Supporting evidence: 21, 22, 23, 1, 2, 3, 4, 5, 6. See the evidence register.

How to judge the change

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across question-set versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and question-set version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

19. Participant observation · Operational

Participant's own experience: Straightforward suppliers can move quickly once the documents are complete. For an exception I sometimes send the same file to several approvers and wait for replies in different places. Others on the team say a direct conversation is enough. I want to check when that shorter route is actually authorized. A complete renewal request received a decision during the regular review, and I did not need an extra conversation.

20. Participant observation · Managerial

Participant's own experience: The regular review meeting keeps most files moving. Exceptions may wait between meetings, and I sometimes seek confirmation from both procurement and the requesting manager. I have also seen urgent decisions completed promptly. I would separate urgent and routine examples before assuming the delay is the same for everyone. A complete renewal request received a decision during the regular review, and I did not need an extra conversation.

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-24T22:35:54.912Z. Report version monderman-interpretation-20260924.70. This report preserves the evidence and research used when it was prepared.

DISTRIBUTION AT A GLANCE

Box = interquartile range; dark line = median; gold dot = mean. Results by participant perspective describe the submitted groups; they do not change how the Median Diagnostic Score is calculated.

01 · COMPARISON READ

Observed same-instrument pattern

This result summarizes 15 submitted runs from Decision Velocity. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

MEDIAN DIAGNOSTIC SCORE	INTERQUARTILE RANGE	PERSPECTIVE DIFFERENCE	COVERAGE
62	**61.5 – 63**	**Not established**	**15 runs**
Response comparison	Middle 50% of eligible runs	No published difference between participant perspectives	Response comparison

AGREEMENT VERSUS DIVERGENCE

The observed runs are closely aligned (sample sd 6.3, IQR 1.5). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

MEAN AND MEDIAN

3 pt mean–median gap

Consider the difference between the mean and median when reading the overall result.

2. Agreement, divergence, and coverage

Decision Velocity

Eligible runs	15
Median score	62
Mean score	65
Observed range	61 – 77
Interquartile range	61.5 – 63
Sample standard deviation	6.3
Outlier status	Not classified from aggregate source data

Aligned. The observed runs are closely aligned (sample sd 6.3, IQR 1.5). This describes the submitted runs, not verified agreement between distinct people or population representativeness.

Results by participant perspective

Managerial · 5 runs	Mean 64.2 · median 61
Operational · 5 runs	Mean 65 · median 62
Senior Leader · 5 runs	Mean 65.8 · median 63

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

3. Response comparison

Observed same-instrument pattern

Response Comparison · Within Lens Synthesis

This result summarizes 15 submitted runs from Decision Velocity. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

Response comparison: 15 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic response comparison. Its central score, spread, and segment differences describe the 15 submitted runs. The observed runs are closely aligned (sample sd 6.3, IQR 1.5). This describes the submitted runs, not verified agreement between distinct people or population representativeness. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this response comparison to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

Score basis. Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

4. Agreements and differences

Recurring signals

Aligned observed set

Decision Velocity is closely aligned across 15 submitted runs. This describes the submitted scores, not verified agreement between distinct people. Population representativeness also requires a documented sampling frame and verified coverage of distinct people.

Decision Velocity

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

5. Results by participant perspective

Operational

Results from the Operational perspective: Decision Velocity: 5 recorded participants, mean 65, median 62. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Managerial

Results from the Managerial perspective: Decision Velocity: 5 recorded participants, mean 64.2, median 61. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Senior Leader

Results from the Senior Leader perspective: Decision Velocity: 5 recorded participants, mean 65.8, median 63. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

6. Evidence in this run

> **Response comparison.** These responses can be compared within the recorded campaign scope. The remaining campaign readiness checks must be resolved before broader conclusions.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

EVIDENCE STRENGTH

Response comparison

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTION-SET AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period. Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

7. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published AAPOR guidance. Monderman defines its own eligibility rules; AAPOR has not validated them.

> **Organizational implication.** The read shows how the recorded participant scores cluster and vary within one diagnostic. It does not establish why this condition occurs or how it interacts with the other Monderman lenses.

> **INTERPRETATION BOUNDARY**
>
> These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.
