MONDERMAN. Q²-SODI™ · DEPTH SYNTHESIS

Depth Synthesis Executive Report

Results from eligible runs of one Diagnostic, showing the median, score distribution, differences between participant perspectives and limits of the evidence.

EXECUTIVE REPORT

Sample report · Example data

52 **STRUCTURAL CLARITY MEDIAN DIAGNOSTIC SCORE**

Material observed strain

Campaign checks recorded evidence

SAMPLE CREATED	PRODUCT	RUNS
September 14, 2026	Depth Synthesis	27
LENSES	**EVIDENCE**	
1	Campaign readiness checks satisfied	

27 submitted Structural Clarity runs produce a median score of 52, with an observed range of 49–74. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. The decision brief that follows includes a separate operational planning scenario, based on recorded activity and stated change assumptions. Diagnostic scores do not calculate its time or financial values.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

OPERATIONAL VALUE

Decision brief: three sources of value

Supplier onboarding improvement plan · 12 months

> All three benefit categories are covered. Summary and chart values are rounded. Detailed tables retain cents and fractional hours.

Central planning case

Lower current spending

$77,220

Potential change against the stated spending baseline

Example current expenses that can be reduced: duplicate external checks and paid overtime. Ordinary salaries remain unchanged.

Avoided future spending

$54,953

Potential change against the stated spending baseline

Example approved growth plan: added review support from month four and new external verification volume from month seven, without reducing required service.

Retained staff capacity

$260,404

2,478 retained hours; not cash savings

Illustrative 28-day operating records for 30 people. Distinct activity logs exclude external-service invoices.

Total cost, including internal staff time

$54,600

Net planning value

$337,977

Includes retained staff capacity; not a cash return.

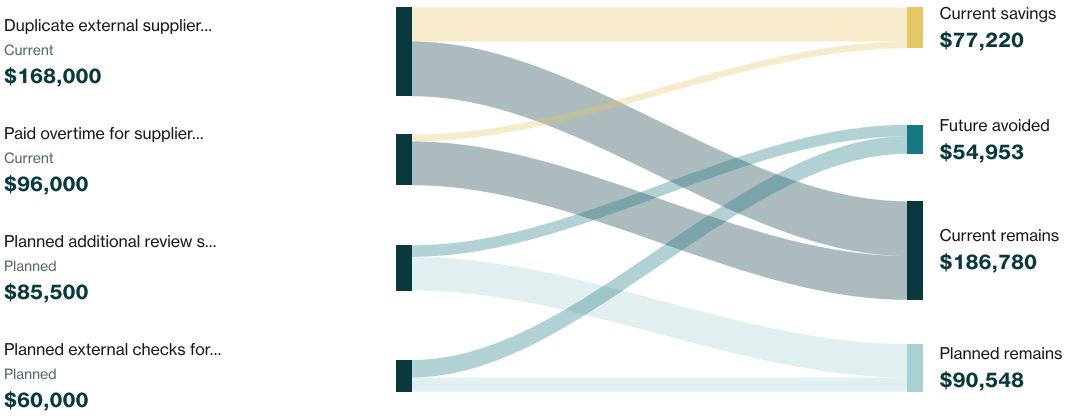

Central case: money and staff time

Two views of the proposed change, before costs. The baseline covers entered activities and expenses, not all organizational work or spending. Costs and net value are shown separately.

Money: current and planned spending

$409,500 current and planned expense baseline → **$277,328** remains; **$132,173** in potential spending benefits.

Baseline · 12 months **After the proposed changes**

Current savings and avoided future spending remain separate outcomes. Avoided spending is measured against documented plans, not a bank-balance increase. Salary-valued retained capacity is not included in this money chart.

Staff time: allocation and retained capacity

15,654 h recorded-work baseline → **12,784 h** remains; **2,870 h** could be released.

Baseline · 12 months **After the proposed changes**

Released time assigned to current or planned spending is excluded from time available for other work. Hours and dollars describe related effects; do not add them together.

Directional estimates based on collected self-reported sample data, recorded operational inputs and stated assumptions. Each diagram uses one unit and a fixed scale across Low, Central and High. Translucent ribbons reconcile minor rounding differences; the tables retain the saved values. Staff time is not automatically cash savings. Full item-by-item sources and assumptions follow in the report.

Three planning cases

Measure	Low	Central	High
Lower current spending	$54,720	$77,220	$101,400
Avoided future spending	$36,660	$54,952.5	$71,280
Retained staff capacity	$184,861.41	$260,404.29	$331,940.93
Retained staff hours	1,759.22	2,478.32	3,162.46
Cash investment	$41,600	$36,600	$31,600
Total cost including internal staff time	$65,600	$54,600	$43,600
Net current-spending effect	$13,120	$40,620	$69,800
Net spending versus baseline	$49,780	$95,572.5	$141,080
Net planning value	$210,641.41	$337,976.79	$461,020.93
Entered benefit subtotal	$276,241.41	$392,576.79	$504,620.93
Entered subtotal less full cost	$210,641.41	$337,976.79	$461,020.93

Low pairs low benefit assumptions with high costs; high pairs high assumptions with low costs. Labor assigned to spending reductions is removed from retained capacity first, so retained capacity can be lower in a stronger spending case. These are planning cases, not confidence intervals or measured savings.

Interpretation and next steps

The published synthesis score for these selected runs is 52, and all 9 recorded answers from people doing the work said that, when they need something from another team, ownership is “Often unclear: I ask two or three people first”. Next step: test a shared decision-and-handoff agreement in the affected team, after checking that pattern against recent work records.

Supporting evidence: 1, 2, 3. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

Within these selected Structural Clarity runs, the senior leader group mean of 74 sits above the manager group mean of 52 and the mean of 49 for people doing the work. Each of those group means rests on 9, 9 and 9 submitted runs respectively, out of 27 submitted runs for this diagnostic, and submitted runs need not come from distinct people.

Supporting evidence: 4, 5, 6, 7, 8, 9, 10. See the evidence register.

The saved variation status for these runs is recorded as Two separated score groups, with supplied scores ranging from 49 at the low end to 74 at the high end. This describes how the submitted scores are distributed and does not identify a cause or a position against other organizations.

Supporting evidence: 11, 12, 13. See the evidence register.

Asked whether it is clear who owns something they need from another team, all 9 recorded answers from people doing the work were “Often unclear: I ask two or three people first”. To a differently worded senior leader question about telling from the formal structure who is responsible, all 9 recorded answers were “Usually visible with occasional exceptions”. The two questions are not worded alike, so these are separate readings rather than a like-for-like comparison.

Supporting evidence: 2, 3, 14, 15. See the evidence register.

> **Reported experience**
>
> Managers · Structural Clarity
>
> Scope: Supplier onboarding across the participating operating team
>
> “Participant's own experience: Routine suppliers usually have a clear owner and the checklist is followed. Exceptions are less clear: the requesting manager expects procurement to decide, while procurement sometimes sends the decision back. Some team members say ownership is clear in practice, so I would compare actual exception cases before changing responsibilities. My recent examples include both routine requests and exceptions.”

Ask this participant to list the specific recent cases they have in mind and to record, for each one, which role made the final decision and when.

Supporting evidence: 16. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

One operational account reports that when a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide, and that this participant's experience is mainly routine requests. A senior leader account reports hearing different accounts about who decides exceptions, with their own experience mainly the escalated ones. Together these reported conditions could mean that contested ownership sits in exception handling rather than routine onboarding. A practical check is to pull a set of recent exception cases and record who made the final decision in each.

Supporting evidence: 17, 18. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

Use only the selected runs and the saved comparison details in this report.

Risk to consider

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

Next step 1

Read the saved variation status together with the lowest and highest supplied scores for these selected runs, then record whether a closer review is worth doing.

Question-set compatibility is Verified, work scope compatibility is Common work scope recorded and the time window is Aligned time window, so the spread can be read as saved; it still explains nothing about the wider organization.

Supporting evidence: 19, 20, 21, 4, 11, 12, 13. See the evidence register.

How to judge the change

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

Next step 2

Present the saved role-group means for this diagnostic beside their submitted-run counts as a sample comparison, not a ranking of roles.

The senior leader mean stands apart from the other two role means in these runs, and showing the counts alongside keeps the comparison tied to the submitted sample.

Supporting evidence: 19, 20, 21, 5, 6, 7, 8, 9, 10. See the evidence register.

How to judge the change

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

Three levels of change

These are alternatives, not a sequence or a presumption that a larger change is better. Check each option's prerequisites and risks.

Limited change

Clarify who decides, who contributes and who carries out one recurring piece of work.

All 9 recorded manager answers about how clear it is who can decide what were "Depends on the situation and who applies pressure", so a single recurring piece of work is a narrow place to set out those roles.

Supporting evidence: 1, 22, 23, 24, 25. See the evidence register.

Before trying it

Check the reported condition against specific work examples and confirm who owns the test.

Risk to consider

A local change may move work or risk elsewhere. Check its effects on the people receiving the work.

How to judge the change

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

Moderate change

Test a shared decision-and-handoff agreement in the affected team.

All 9 recorded answers from people doing the work about handoff points were “Known informally but not formally stated”, which is what a written decision-and-handoff agreement would put on paper for one team.

Supporting evidence: 1, 22, 23, 26, 27. See the evidence register.

Before trying it

Confirm the reported problem in work records, agree the change with affected roles and retain required controls.

Risk to consider

A local change may move work or risk elsewhere. Check its effects on the people receiving the work.

How to judge the change

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

Structural change

Review the formal allocation of authority and accountability across the affected units.

All 9 recorded manager answers on where unclear arrangements start were “Accountability: unclear who answers when things go wrong”, the kind of selection a review of formal authority and accountability would examine across units.

Supporting evidence: 1, 22, 23, 28, 29. See the evidence register.

Before trying it

Confirm the problem across affected roles and work records. Obtain the appropriate authority, assess risks and begin with a reversible test.

Risk to consider

Changing authority or controls can create new gaps. Do not implement an organization-wide change from diagnostic responses alone.

How to judge the change

Agree an observable measure before the change, review unintended effects and repeat the same diagnostic on a comparable scope and period.

RECOMMENDED PATH

Test a shared decision-and-handoff agreement in the affected team.

It stays within one team while addressing the handoff wording chosen in all 9 recorded answers from people doing the work, which was “Known informally but not formally stated”.

Supporting evidence: 1, 22, 23, 26, 27. See the evidence register.

This campaign met the evidence checks for a recommended path, with operating evidence and safeguards recorded by an authorized reviewer.

What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across question-set versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and question-set version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

Supporting evidence register

Each item is listed once. Numbers beside findings and actions refer to these saved values or attributed observations.

16. Participant observation · Managerial

Participant's own experience: Routine suppliers usually have a clear owner and the checklist is followed. Exceptions are less clear: the requesting manager expects procurement to decide, while procurement sometimes sends the decision back. Some team members say ownership is clear in practice, so I would compare actual exception cases before changing responsibilities. My recent examples include both routine requests and exceptions.

17. Participant observation · Operational

Participant's own experience: The onboarding checklist is useful and I know who prepares each file. When a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide. I ask both before proceeding. A colleague says the written responsibility table is enough; that has not resolved the exceptions I have handled. My experience is mainly with routine requests.

18. Participant observation · Senior Leader

Participant's own experience: I understand which function owns supplier approval, and routine work normally reaches the right owner. I hear different accounts about who decides exceptions. The formal responsibility table looks clear to me, but I have not checked whether people use it in the same way during a difficult case. My experience is mainly with the exceptions that are escalated.

Research and sector context

No newly checked public-source research is included. Any listed practice sources are dated references, not a current sector benchmark.

The reviewed sources do not supply a comparable sector distribution for this diagnostic. No sector percentile or numerical peer estimate is available.

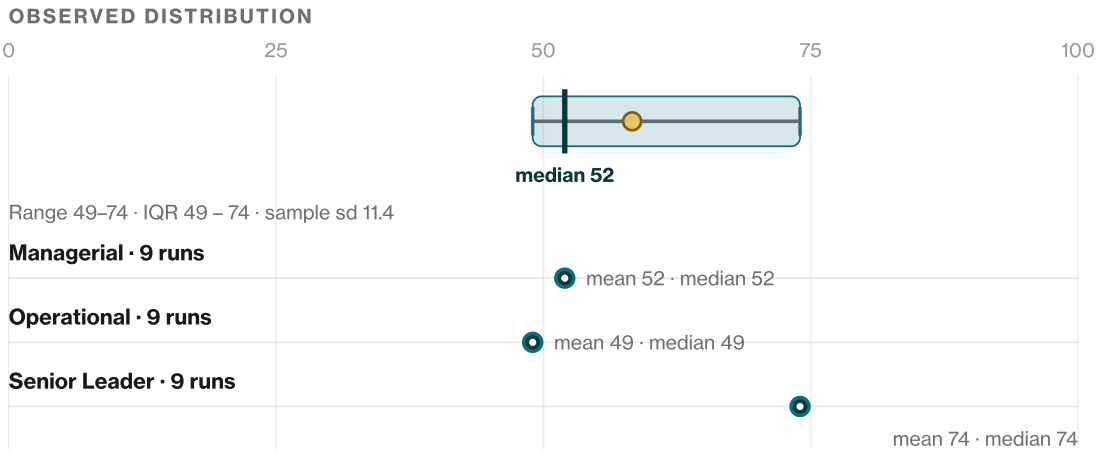

1. About the Baldrige Excellence Framework · National Institute of Standards and Technology · Checked 2026-09-08

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-14T13:00:03.587Z. Report version monderman-interpretation-20260914.53. This report preserves the evidence and research used when it was prepared.

DISTRIBUTION AT A GLANCE

Box = interquartile range; dark line = median; gold dot = mean. Results by participant perspective describe the submitted groups; they do not change how the Median Diagnostic Score is calculated.

01 · DEPTH READ

Divided observed respondent pattern

Across 27 submitted Structural Clarity runs, the score distribution separates into two materially different groups. The synthesis does not infer why. Locate the split by role, unit, pathway, or response coverage before one organization-wide action is chosen.

MEDIAN DIAGNOSTIC SCORE	INTERQUARTILE RANGE	PERSPECTIVE DIFFERENCE	COVERAGE
52	**49 – 74**	**25 pts**	**27 runs**
Campaign readiness checks satisfied	Middle 50% of eligible runs	Operational to Senior Leader	Campaign readiness checks satisfied

AGREEMENT VERSUS DIVERGENCE

The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used.

MEAN AND MEDIAN

6.3 pt mean–median gap

Consider the difference between the mean and median when reading the overall result.

2. Agreement, divergence, and coverage

Structural Clarity

Eligible runs	27
Median score	52
Mean score	58.3
Observed range	49 – 74
Interquartile range	49 – 74
Sample standard deviation	11.4
Outlier status	Not classified from aggregate source data

Divided. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used.

Results by participant perspective

Managerial · 9 runs	Mean 52 · median 52
Operational · 9 runs	Mean 49 · median 49
Senior Leader · 9 runs	Mean 74 · median 74

Difference between perspectives: The observed segment means differ by 25 points. This may reflect different local conditions, vantage effects, or sample composition and should be investigated before being treated as one shared condition.

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

3. Executive synthesis

Divided observed respondent pattern

Campaign Readiness Checks Satisfied · Distribution Finding

Across 27 submitted Structural Clarity runs, the score distribution separates into two materially different groups. The synthesis does not infer why. Locate the split by role, unit, pathway, or response coverage before one organization-wide action is chosen.

Campaign readiness checks satisfied: 27 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic Depth Synthesis. Its central score, spread, and segment differences describe the 27 submitted runs. The observed runs form two materially separated score groups (67% lower, 33% higher; 23.5-point mean gap). The split should be located by unit or vantage before one organization-wide interpretation is used. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this Depth Synthesis to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

Score basis. Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

4. Agreements and differences

Recurring signals

Divided observed set

Structural Clarity separates into two materially different score groups. The split should be located by unit, role, or operating context before the mean is treated as one shared condition.

Structural Clarity

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

Differences to keep visible

- Structural Clarity contains two materially separated score groups (67% lower and 33% higher). The division should be mapped to units, roles, or pathways before the overall median is used as one shared organizational condition.
- The observed segment means differ by 25 points. This may reflect different local conditions, vantage effects, or sample composition and should be investigated before being treated as one shared condition.

5. Operational inputs and reconciliation

Each value comes from the saved scenario, not from a diagnostic score. Spending reductions use an existing expense baseline; avoided future spending uses a documented planned expense. Retained staff capacity excludes every hour assigned to either spending category.

The same measured activity and people over the stated period; no scaling to unmeasured staff.

Lower current spending

Example current expenses that can be reduced: duplicate external checks and paid overtime. Ordinary salaries remain unchanged. · Estimated

Avoided future spending

Example approved growth plan: added review support from month four and new external verification volume from month seven, without reducing required service. · Estimated

Retained staff capacity

Illustrative 28-day operating records for 30 people. Distinct activity logs exclude external-service invoices. · Estimated

Coordinating supplier exceptions

Measurement window	2026-08-16T04:05:34.496Z to 2026-09-13T04:05:34.496Z
People covered by records	30
Measured activity hours	700
Loaded hourly cost	$110
Source basis	Time Study
Source reference	Example time log EX-01: exception coordination, excluding repeated reviews
Proposed change	Give each supplier exception one decision owner and collect the required information before review. The example tests a 20–30% time reduction with 70–85% adoption; required checks remain.

Activity assumptions

Measure	Low	Central	High
Reduction assumption	20%	25%	30%
Adoption assumption	70%	80%	85%

Saved activity reconciliation

Measure	Low	Central	High
Gross hours freed	1,278.38	1,826.25	2,328.47
Hours assigned to current spending	96	162	228
Hours assigned to future spending	0	0	0
Retained staff hours	1,182.38	1,664.25	2,100.47
Retained capacity value	$130,061.25	$183,067.5	$231,051.56

Repeating internal document reviews

Measurement window	2026-08-16T04:05:34.496Z to 2026-09-13T04:05:34.496Z
People covered by records	30
Measured activity hours	500
Loaded hourly cost	$95
Source basis	Time Study
Source reference	Example time log RV-02: repeated internal reviews, excluding exception coordination
Proposed change	Use one completeness check and a shared record of completed reviews. The example tests a 15–25% time reduction with 70–85% adoption by avoiding repeated checks on unchanged documents.

Activity assumptions

Measure	Low	Central	High
Reduction assumption	15%	20%	25%
Adoption assumption	70%	80%	85%

Saved activity reconciliation

Measure	Low	Central	High
Gross hours freed	684.84	1,043.57	1,385.99
Hours assigned to current spending	0	0	0
Hours assigned to future spending	108	229.5	324
Retained staff hours	576.84	814.07	1,061.99
Retained capacity value	$54,800.16	$77,336.79	$100,889.36

Duplicate external supplier checks

Benefit category	Lower current spending
Resource reference	expense-current-checks
Expense type	Non Labor
Baseline each month	40 checks
Cost per unit	$350
Active planning months	1 to 12 (12 months)
Linked capacity activity	Not applicable: non-labor expense
Source reference	Example invoice baseline CH-01: 40 duplicate checks each month at $350 each
Proposed change	Reuse a valid completed external check instead of commissioning it again. Confirm contractual cancellation rights and retain all mandatory checks.

Spending assumptions

Measure	Low	Central	High
Reduction assumption	35%	45%	55%
Adoption assumption	80%	85%	90%

Saved spending benefit

Measure	Low	Central	High
Spending benefit	$47,040	$64,260	$83,160
Capacity hours assigned to this expense	0	0	0

Paid overtime for supplier exceptions

Benefit category	Lower current spending
Resource reference	expense-current-overtime
Expense type	Labor
Baseline each month	100 hours
Cost per unit	$80
Active planning months	1 to 12 (12 months)
Linked capacity activity	exception-coordination
Source reference	Example payroll baseline OT-02: 100 paid overtime hours each month at $80 per hour
Proposed change	Use released exception-coordination hours to reduce paid overtime. These hours are deducted from capacity available for other work.

Spending assumptions

Measure	Low	Central	High
Reduction assumption	10%	15%	20%
Adoption assumption	80%	90%	95%

Saved spending benefit

Measure	Low	Central	High
Spending benefit	$7,680	$12,960	$18,240
Capacity hours assigned to this expense	96	162	228

Planned additional review support

Benefit category	Avoided future spending
Resource reference	expense-planned-review-support
Expense type	Labor
Baseline each month	100 hours
Cost per unit	$95
Active planning months	4 to 12 (9 months)
Linked capacity activity	repeated-reviews
Source reference	Example approved plan GR-03: 100 additional review-support hours per month from month four at $95 per hour
Proposed change	Use part of the time released from repeated reviews to absorb the planned work. Reduce only the planned hours replaced by that capacity, not an entire hire.

Spending assumptions

Measure	Low	Central	High
Reduction assumption	15%	30%	40%
Adoption assumption	80%	85%	90%

Saved spending benefit

Measure	Low	Central	High
Spending benefit	$10,260	$21,802.5	$30,780
Capacity hours assigned to this expense	108	229.5	324

Planned external checks for new suppliers

Benefit category	Avoided future spending
Resource reference	expense-planned-growth-checks
Expense type	Non Labor
Baseline each month	20 checks
Cost per unit	$500
Active planning months	7 to 12 (6 months)
Linked capacity activity	Not applicable: non-labor expense
Source reference	Example approved growth budget GR-04: 20 new supplier checks per month from month seven at $500 each, separate from existing duplicate checks
Proposed change	Use accepted shared verification for eligible new suppliers instead of purchasing another check. This planned volume is not included in the current-expense baseline.

Spending assumptions

Measure	Low	Central	High
Reduction assumption	55%	65%	75%
Adoption assumption	80%	85%	90%

Saved spending benefit

Measure	Low	Central	High
Spending benefit	$26,400	$33,150	$40,500
Capacity hours assigned to this expense	0	0	0

Month-by-month capacity allocation

Identical consecutive months are shown together. Each row still shows one month, not the total for that month range.

Coordinating supplier exceptions

Months 1 to 12 - hours in each month

Measure	Low	Central	High
Gross hours freed	106.53	152.19	194.04
Assigned to current spending	8	13.5	19
Assigned to future spending	0	0	0
Retained capacity hours	98.53	138.69	175.04

Repeating internal document reviews

Months 1 to 3 - hours in each month

Measure	Low	Central	High
Gross hours freed	57.07	86.96	115.5
Assigned to current spending	0	0	0
Assigned to future spending	0	0	0
Retained capacity hours	57.07	86.96	115.5

Months 4 to 12 - hours in each month

Measure	Low	Central	High
Gross hours freed	57.07	86.96	115.5
Assigned to current spending	0	0	0
Assigned to future spending	12	25.5	36
Retained capacity hours	45.07	61.46	79.5

Paid overtime for supplier exceptions - allocated capacity

Months 1 to 12 - hours in each month

Measure	Low	Central	High
Hours allocated to this expense	8	13.5	19

Planned additional review support - allocated capacity

Months 4 to 12 - hours in each month

Measure	Low	Central	High
Hours allocated to this expense	12	25.5	36

Implementation and subscription

Cost input ranges (lower to higher costs)

Measure	Low	Central	High
Implementation cash	$10,000	$15,000	$20,000
Internal implementation capacity	$12,000	$18,000	$24,000

Subscription allocation: $21,600

Illustrative 12-month Signal allocation: $21,600 paid annually in advance ($24,000 if paid in installments). External support is incremental cash; internal staff time is separate capacity cost. No costs are counted twice. This is an example assumption, not a customer quotation.

Gross recovered activity hours are spread evenly across the planning months. Labor expense benefits allocate hours only in their stated active months. Current and future expense allocations share the same capacity limit each month.

Campaign participation checks are satisfied. They do not establish financial accuracy.

The three benefit categories are assessed separately. Missing estimates are not zero; partial subtotals include only entered categories.

Low, central and high are sensitivity cases, not probabilities or confidence intervals; retained capacity values need not be in increasing order.

The planning period assumes measured activity volume continues, with capacity spread evenly across months. Review seasonality and planned changes.

Existing-spend reductions and future-spend avoidance require different baselines. A future spending plan is a customer-declared counterfactual.

Resource identities and overlap attestations require customer review; the source records have not been independently audited.

Use actual implementation and operating results to update the scenario; a favorable calculation is not proof of effectiveness.

6. Results by participant perspective

Operational

Results from the Operational perspective: Structural Clarity: 9 recorded participants, mean 49, median 49. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

Managerial

Results from the Managerial perspective: Structural Clarity: 9 recorded participants, mean 52, median 52. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

Senior Leader

Results from the Senior Leader perspective: Structural Clarity: 9 recorded participants, mean 74, median 74. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Campaign readiness checks satisfied.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

7. Evidence in this run

> **Campaign readiness checks satisfied.** The declared scope, recorded participant identities, instrument versions, group coverage and bounded missing-score checks meet the current campaign policy. This does not establish measurement validity, a cause or an effective intervention.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

EVIDENCE STRENGTH

Campaign readiness checks satisfied

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTION-SET AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period. Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

8. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published AAPOR guidance. Monderman defines its own eligibility rules; AAPOR has not validated them.

> **Organizational implication.** The mean is not the decision-ready finding. The organization should first identify where the lower and higher score groups sit and whether they reflect different units, roles, pathways, or response coverage.

> **INTERPRETATION BOUNDARY**
>
> These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.
