52 STRUCTURAL CLARITY MEDIAN DIAGNOSTIC SCORE

Material observed strain

Included responses only evidence

SAMPLE CREATED	PRODUCT	RUNS
September 24, 2026	Response comparison	15
LENSES	**EVIDENCE**	
1	Response comparison	

15 submitted Structural Clarity runs produce a median score of 52, with an observed range of 49–74. The observed runs show moderate variation (sample sd 9.6, IQR 1.5). Use the distribution and segment reads alongside the central score. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration. A combined modeled time and labor-cost estimate is not published: Diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

INTERPRETATION BOUNDARY

These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.

Financial benefit assessment

Financial estimates become available with enough campaign data for Depth Synthesis or Cross-Lens Synthesis.

Each analysis must meet its participation and coverage requirements. Estimates also need the relevant working-time, pay and spending inputs.

Continue gathering responses and check readiness in Workspace Analysis.

Interpretation and next steps

For this lens the submitted runs give a median of 52 and a mean of 55.6 across 15 runs, read as a response comparison within this sample. An eligible next step is to read the saved spread label with the score range and record whether closer review of these runs is warranted.

Supporting evidence: 1, 2, 3. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

Across the Structural Clarity runs in this saved sample, supplied scores range from 49 to 74, and the recorded spread across these 15 submitted runs is Moderate variation. The most common classified focus recorded for this lens is unclear authority and ownership, which is a saved classification and not a described process. These figures are not a peer benchmark, and submitted runs need not come from distinct people.

Supporting evidence: 4, 1, 5, 6, 7. See the evidence register.

Within the same runs, the managers group mean of 56.4 from 5 submitted runs equals the senior leaders group mean of 56.4 from 5 submitted runs, while the people doing the work group mean of 54 from 5 submitted runs is numerically lower. This is a response comparison inside this sample; it ranks no role, estimates no wider population and shows no cause.

Supporting evidence: 8, 9, 10, 11, 12, 13. See the evidence register.

The saved result records 15 distinct included participants against a declared eligible population of 30, with 15 submitted runs in total. Question-set compatibility is recorded as Verified, work scope compatibility as Common work scope recorded and time-window compatibility as Aligned time window. Participation of this kind establishes neither representativeness nor validity.

Supporting evidence: 14, 15, 16, 17, 18, 19. See the evidence register.

> Scope: Supplier onboarding across the participating operating team
>
> “Participant's own experience: The onboarding checklist is useful and I know who prepares each file. When a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide. I ask both before proceeding. A colleague says the written responsibility table is enough; that has not resolved the exceptions I have handled. In a recent routine renewal, the checklist and named owner were enough to show me the next step.”

What records exist, if any, of supplier onboarding exception cases in the covered period, and who is recorded as having decided each one? Review such records only if they are available.

Supporting evidence: 20. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

A managerial participant reports that routine suppliers usually have a clear owner and the checklist is followed, that for exceptions the requesting manager expects procurement to decide while procurement sometimes sends the decision back, and that some team members say ownership is clear in practice, so this participant would compare actual exception cases before changing responsibilities. It is possible that decision authority for exceptions is understood differently by the two functions, which might explain the differing accounts, although the same account reports a contrary view from team members. A practical check is to ask first whether any exception cases arose in the period and, if records of them are available, to review who decided each one.

Supporting evidence: 21. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

Use only the selected runs and the saved comparison details in this report.

Risk to consider

Do not assume each run came from a different person, infer a cause, or apply the result beyond this submitted sample.

Next step 1

Read the saved spread label together with the lowest and highest supplied scores for this lens, then record whether a closer review of these selected runs is worthwhile.

The saved range and spread describe how the submitted scores sit within this sample only. Reading them together produces a short written judgement about whether further review is useful, without assigning a cause or extending the reading past these runs.

Supporting evidence: 15, 16, 17, 1, 5, 6, 7. See the evidence register.

How to judge the change

Record whether these results warrant a closer review and why. Keep any follow-up specific to the selected runs; these summaries do not identify a cause.

Next step 2

Set out the saved role-group means and their submitted-run counts side by side for this lens, presented as a sample comparison rather than a ranking.

Two role-group means match while the third is numerically lower, so a plain side-by-side statement keeps the comparison accurate. Written this way it reports what the submitted runs contain and avoids treating the difference as a cause or as a judgement about any person.

Supporting evidence: 15, 16, 17, 8, 9, 10, 11, 12, 13. See the evidence register.

How to judge the change

The report states the compared means and submitted-run counts without assigning a cause or applying the result beyond this sample.

What this report cannot establish

This interpretation concerns the selected runs from this organization, not customers in other organizations.

The submitted sample may not represent the organization. Different scores can reflect different work, roles or sample composition.

No cause, time trend, sector percentile, prediction of performance or realized savings is established.

Comparisons across question-set versions can reflect changes in measurement. A withheld composite remains withheld.

Written observations, when supplied, are attributed participant accounts, not independently verified facts. A bounded role-and-lens selection may omit other written observations.

Answer summaries describe only recorded answers to each exact question, perspective, depth and question-set version in this campaign. Adaptive nonappearance is not an incomplete run. Withheld detail is not a favorable response. These distributions establish neither population prevalence, causation nor intervention eligibility.

20. Participant observation · Operational

Participant's own experience: The onboarding checklist is useful and I know who prepares each file. When a supplier needs an exception, procurement and the requesting team sometimes each expect the other to decide. I ask both before proceeding. A colleague says the written responsibility table is enough; that has not resolved the exceptions I have handled. In a recent routine renewal, the checklist and named owner were enough to show me the next step.

21. Participant observation · Managerial

Participant's own experience: Routine suppliers usually have a clear owner and the checklist is followed. Exceptions are less clear: the requesting manager expects procurement to decide, while procurement sometimes sends the decision back. Some team members say ownership is clear in practice, so I would compare actual exception cases before changing responsibilities. In a recent routine renewal, the checklist and named owner were enough to show me the next step.

Research and sector context

No newly checked public-source research is included. Any listed practice sources are dated references, not a current sector benchmark.

The reviewed sources do not supply a comparable sector distribution for this diagnostic. No sector percentile or numerical peer estimate is available.

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-24T22:37:19.849Z. Report version monderman-interpretation-20260924.70. This report preserves the evidence and research used when it was prepared.

DISTRIBUTION AT A GLANCE

Box = interquartile range; dark line = median; gold dot = mean. Results by participant perspective describe the submitted groups; they do not change how the Median Diagnostic Score is calculated.

01 · COMPARISON READ

Observed same-instrument pattern

This result summarizes 15 submitted runs from Structural Clarity. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

MEDIAN DIAGNOSTIC SCORE	INTERQUARTILE RANGE	PERSPECTIVE DIFFERENCE	COVERAGE
52	**50.5 – 52**	**Not established**	**15 runs**
Response comparison	Middle 50% of eligible runs	No published difference between participant perspectives	Response comparison

AGREEMENT VERSUS DIVERGENCE

The observed runs show moderate variation (sample sd 9.6, IQR 1.5). Use the distribution and segment reads alongside the central score.

MEAN AND MEDIAN

3.6 pt mean–median gap

Consider the difference between the mean and median when reading the overall result.

2. Agreement, divergence, and coverage

Structural Clarity

Eligible runs	15
Median score	52
Mean score	55.6
Observed range	49 – 74
Interquartile range	50.5 – 52
Sample standard deviation	9.6
Outlier status	Not classified from aggregate source data

> **Mixed.** The observed runs show moderate variation (sample sd 9.6, IQR 1.5). Use the distribution and segment reads alongside the central score.

Results by participant perspective

Managerial · 5 runs	Mean 56.4 · median 52
Operational · 5 runs	Mean 54 · median 49
Senior Leader · 5 runs	Mean 56.4 · median 52

These statistics describe the submitted runs. A documented sampling frame and verified coverage of distinct people are necessary before any population claim can be considered; these runs do not establish those conditions.

3. Response comparison

Observed same-instrument pattern

Response Comparison · Within Lens Synthesis

This result summarizes 15 submitted runs from Structural Clarity. It describes the central score, variation, and segment differences in the observed set. It does not establish population prevalence or cross-lens cause without additional sampling and diagnostic evidence.

Response comparison: 15 submitted runs from one diagnostic lens. A combined modeled time and labor-cost estimate is withheld because diagnostic scores, participant counts and medians do not establish organizational exposure, recoverable savings or return on investment. These estimates are withheld. A separate planning scenario requires explicit operational measurements and assumptions.

This is a same-Diagnostic response comparison. Its central score, spread, and segment differences describe the 15 submitted runs. The observed runs show moderate variation (sample sd 9.6, IQR 1.5). Use the distribution and segment reads alongside the central score. Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

Use this response comparison to review how scores are distributed and how results differ by participant perspective within this Diagnostic. Compare it with another Diagnostic only when the decision requires evidence from more than one lens.

Score basis. Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

4. Agreements and differences

Recurring signals

Mixed observed set

Structural Clarity shows moderate variation across 15 submitted runs. The central score should be read together with its distribution.

Structural Clarity

This is a repeated pattern within one Diagnostic; it does not show whether the same pattern appears in other Diagnostics.

5. Results by participant perspective

Operational

Results from the Operational perspective: Structural Clarity: 5 recorded participants, mean 54, median 49. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Managerial

Results from the Managerial perspective: Structural Clarity: 5 recorded participants, mean 56.4, median 52. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

Senior Leader

Results from the Senior Leader perspective: Structural Clarity: 5 recorded participants, mean 56.4, median 52. These are recorded account or invitation identities, not independently verified distinct people. This section reports scores only. Campaign status: Response comparison.

This section reports recorded group statistics. Authorized written accounts, when included, are presented separately and do not affect scores.

6. Evidence in this run

> **Response comparison.** These responses can be compared within the recorded campaign scope. The remaining campaign readiness checks must be resolved before broader conclusions.

Each recorded participant identity is counted once across the selected lens campaigns. Account and invitation records are not independent proof of distinct people or of the declared population.

Campaign readiness checks the declared population, compatible measurements and the possible effect of missing responses. Passing these checks is not scientific validation or a probability of accuracy.

EVIDENCE STRENGTH

Response comparison

MEDIAN DIAGNOSTIC SCORE

Published

Median of the submitted scores from the same Diagnostic. Review the score distribution and results by participant perspective separately alongside the median.

SCOPE

Recorded campaign scope

The server matched these included responses to one sponsor-declared work scope and period. Separate participant invitations and selected lens campaigns belong to that shared scope.

RUN-COUNT BALANCE ACROSS DIAGNOSTICS

Reported Not Validated

Largest-to-smallest submitted-run count ratio: 1:1

QUESTION-SET AND SCORING VERSIONS

Instrument versions aligned

IDENTIFIERS FOR SUBMITTED RUNS

Verified

Every submitted result carries a unique source-run identifier.

MEASUREMENT WINDOW

Aligned

Every included response falls within the same sponsor-declared measurement period. Time alignment alone does not show that conditions remained unchanged.

REPRESENTATIVENESS

Recorded participation in a declared population

Distinct account or invitation identities are counted within the sponsor-declared population. This is not independent proof of distinct people, a representative sample or an accurate population declaration.

7. Method and limits

This campaign uses its recorded population, participant identities, measurement versions and period. Readiness checks whether missing responses could move the population median into a different existing score band. These are conservative product rules, not an independently validated scientific threshold. The published score is the median of the included scores for this diagnostic. Differences remain visible. A preferred action additionally requires a recorded operating-evidence and safeguards review; eligibility does not prove an intervention will work.

Participation and missing-response reporting are informed by selected published AAPOR guidance. Monderman defines its own eligibility rules; AAPOR has not validated them.

> **Organizational implication.** The read shows how the recorded participant scores cluster and vary within one diagnostic. It does not establish why this condition occurs or how it interacts with the other Monderman lenses.

> **INTERPRETATION BOUNDARY**
>
> These results describe the submitted runs of one Diagnostic. Applying them to a wider population requires a documented sampling plan and response coverage.
