

Institutional Performance: Executive Report

What this run measured, what the result may mean, what remains uncertain, and what to test next.

EXECUTIVE REPORT

Sample report · Example data

48 **DIAGNOSTIC SCORE**
Drag

SAMPLE CREATED	INSTRUMENT	SCOPE
September 13, 2026	Institutional Performance	Operations

Main measured focus for Supplier onboarding: Extra effort and management support.

Interpretation and next steps

This Institutional Performance run records 48 in the Drag band, based on one participant's answers. Within the unit, translation of intended direction into day-to-day action is reported as “Mixed: clear on some things, not others”, underlying causes of recurring problems as “Mixed: some fixed, many recur”, and management intervention needed to maintain current output as “Sometimes”, alongside the participant's concern that difficult cases depend on repeated management follow-up. Sensible personal next steps are reviewing one recurring-problem example and one management intervention example with their owners before drawing conclusions.

Supporting evidence: 1, 2, 3, 4, 5, 6. See the evidence register.

What the evidence shows

These findings distinguish scored results from what participants reported.

This Institutional Performance run records 48 with band Drag, which reflects scored responses rather than whole-process effectiveness. The participant reports clarity of how their intended direction translates into day-to-day action as “Mixed: clear on some things, not others”, and reliability of decisions staying in place after they make them as “Mixed: depends who owns it”.

Supporting evidence: 1, 2, 3, 7. See the evidence register.

For this unit, the participant reports whether underlying causes of recurring organizational problems are fixed or the problems repeatedly managed as “Mixed: some fixed, many recur”, selected the pattern that the same problems keep coming back, and reports how often problems return after being addressed as “Sometimes: depends on the problem”. Reported recurrence does not establish that no fix was attempted or that a cause went unaddressed.

Supporting evidence: 4, 8, 9. See the evidence register.

The participant describes the current situation in this unit as “Pressure: higher demand or stress” and the strain over the past year on the organization behind these results as “About the same”. Dependence of results on extra effort to make up for weaknesses in how the organization operates is reported as “Moderately: some extra effort makes up for gaps”, and management intervention needed to maintain current output as “Sometimes”.

Supporting evidence: 10, 11, 12, 5. See the evidence register.

Reported experience

Senior leaders · Institutional Performance

Scope: This participant’s reported work

“Participant's own experience: Supplier onboarding continues to support delivery, and the team has adapted when priorities changed. I am concerned that difficult cases depend on repeated management follow-up. Managers differ on whether this is occasional support or a recurring reliance. I would review both successful and delayed cases before changing the operating model. My recent examples include both routine requests and exceptions.”

Which records for a difficult supplier onboarding case could show whether management follow-up occurred more than once, and who would be able to confirm that record?

Supporting evidence: 6. See the evidence register.

What may explain it

Possible explanations to investigate, not established causes.

Where problems return, the response may have addressed the immediate problem rather than a proposed underlying cause: the participant reports underlying causes as “Mixed: some fixed, many recur” and return of problems after being addressed as “Sometimes: depends on the problem”, and their account raises a concern that difficult cases depend on repeated management follow-up, with managers differing on whether this is occasional support or a recurring reliance. This could be examined by reviewing one recurring-problem example with its owner and recording the proposed cause, the response intended to address it, and any evidence for that link.

Supporting evidence: 4, 9, 6. See the evidence register.

Practical next steps

Start with these practical checks or focused changes.

For all next steps

Before trying it

The responsible owner approves the review and access to relevant material. Process or control changes need separate approval.

Risk to consider

Use authorized work examples without personal details. Stop if the review exceeds its agreed scope.

Next step 1

Ask the participant for one recurring-problem example and review it with its owner, recording the proposed underlying cause, the response intended to address it, and any evidence for that link, keeping managing the immediate problem distinct from addressing the proposed cause.

The participant reports underlying causes of recurring organizational problems as “Mixed: some fixed, many recur” and selected the pattern that the same problems keep coming back, so a single case can show which of the two occurred there. Reviewed guidance from the National Institute of Standards and Technology considers leadership, strategy, measurement, operations and results together in such reviews; it is general guidance, not specific to professional services.

Supporting evidence: 4, 8. See the evidence register. Practice sources: 1. See Research and sector context.

How to judge the test

Record the proposed cause, intended response and supporting evidence, or which remain unknown. Record later problem status separately; neither the answer nor a lack of recurrence proves that a cause was fixed.

Next step 2

Ask the participant for one example of a manager stepping in, and with the owner record why the manager stepped in and what they intended to achieve, without assuming the support could be withdrawn.

The participant reports management intervention needed to maintain current output as “Sometimes”, and their account expresses a concern that difficult cases depend on repeated management follow-up, with managers differing on whether this is occasional support or a recurring reliance.

Supporting evidence: 5, 6. See the evidence register.

How to judge the test

Record why the manager stepped in and what they intended to achieve, or state what remains unknown. Finding that their support was necessary is a valid result.

Next step 3

Ask the participant for an example where their intended direction reached day-to-day work; if one is available, review it with the owner and record both the intended direction and the day-to-day action described.

Clarity of how the participant's intended direction translates into day-to-day action is reported as “Mixed: clear on some things, not others”, so one example can show whether the two aligned, differed, or cannot be compared in that case.

Supporting evidence: 3. See the evidence register.

How to judge the test

Record whether the participant's intended direction and the described day-to-day action align, differ, or cannot be compared. Do not require a mismatch to be found.

What this report cannot establish

Responses describe one participant's view. More questions do not establish greater validity.

Missing evidence is unknown, not a favorable result.

Scores do not establish causation, predict later performance or prove realized savings.

Organizational exposure, projected recovery and return on investment are withheld for a single run. A participant's recorded time answer is not organizational savings.

Instrument design-reference ranges are not empirical sector benchmarks.

Names may remain in participant text after best-effort minimization. Observations about other roles remain this participant's account.

Supporting evidence register

Each item is listed once. Numbers beside findings and actions refer to these saved values or attributed observations.

1. Diagnostic score

48

2. Result band

Drag

3. How clearly does your intended direction translate into day-to-day action?

Mixed: clear on some things, not others

4. Are the underlying causes of recurring organizational problems fixed, or are the problems repeatedly managed?

Mixed: some fixed, many recur

5. How much management intervention is needed to maintain current output?

Sometimes

6. Participant observation - Senior Leader

Participant's own experience: Supplier onboarding continues to support delivery, and the team has adapted when priorities changed. I am concerned that difficult cases depend on repeated management follow-up. Managers differ on whether this is occasional support or a recurring reliance. I would review both successful and delayed cases before changing the operating model. My recent examples include both routine requests and exceptions.

7. How reliably do decisions stay in place after you make them?

Mixed: depends who owns it

8. Which of these patterns are present in the organization? Select all that apply.

The same problems keep coming back

9. How often do organizational problems return after being addressed?

Sometimes: depends on the problem

10. Which option best describes the current situation in this unit?

Pressure: higher demand or stress

11. Over the past year, has the strain on the organization behind the results you see increased, decreased, or stayed about the same?

About the same

12. How much do the organization's results depend on extra effort to make up for weaknesses in how it operates?

Moderately: some extra effort makes up for gaps

Research and sector context

No newly checked public-source research is included. Any listed practice sources are dated references, not a current sector benchmark.

The reviewed sources do not supply a comparable sector distribution for this diagnostic. No sector percentile or numerical peer estimate is available.

How Monderman produced this interpretation

Monderman's diagnostic engine produces the scores and determines which findings and recommendations the evidence supports. AI contributes research and explanation within those rules. Automated checks and a separate AI review check the interpretation against its supporting evidence before publication.

Prepared 2026-09-14T15:57:35.558Z. Report version monderman-interpretation-20260914.55. This report preserves the evidence and research used when it was prepared.

Main measured focus for Supplier onboarding: Extra effort and management support.

DIAGNOSTIC SCORE

48

DRAG

Based on this participant's answers, the institutional performance score is 48 in the drag band for the area examined. The measured issues are concentrated, and Compensatory dependence is the largest.

PRIMARY MEASURED FOCUS	PARTICIPANT PERSPECTIVE	CHANGE OVER TIME	EVIDENCE DEPTH
Extra effort and management support The submitted answers report high extra effort or management lift alongside visible output. The run does not establish that the effort sustains output.	Senior Leader One person's recorded view	Not established by this run	Narrow, focused read Senior Leader perspective

WHAT THIS MAY MEAN

Consider compensatory dependence as a focus for a bounded comparison in this institution. Review reported extra effort separately; this run does not establish that the highlighted measure is the only issue or the highest priority.

Dimension profile

The profile keeps the total score and its contributing dimensions visible together. For condition dimensions, lower values indicate greater measured constraint. For Compensatory Effort, when shown, higher values indicate more reported extra effort.

WHERE THE MEASURED ISSUE APPEARS

PATTERN ACROSS DIMENSIONS

Concentrated

The submitted answers report high extra effort or management lift alongside visible output. The run does not establish that the effort sustains output.

FINDINGS FROM SCORED ANSWERS

- Execution coherence is below the instrument's stronger range in this submitted run.
- Decision reliability is below the instrument's stronger range in this submitted run.
- Adaptive capacity is below the instrument's stronger range in this submitted run.
- The institutional-confidence measure is below the instrument's stronger range.

What the result supports and what it does not

DESIGN REFERENCE (NOT A PEER BENCHMARK) This run sits below the instrument's expert-authored design-reference range for Professional Services. The position indicates heavier measured institutional strain than the reference assumptions, but it does not by itself establish the cause.	TRADEOFF TO CONSIDER Visible results can coexist with extra effort. Review performance and reported extra effort separately. This run does not establish a relationship between them.
RELATIONSHIP BETWEEN THE MEASURED DIMENSIONS The institutional-condition score is below 67 and the compensatory-effort measure is 50 or above. These are the quadrant boundaries, not additional score bands. The measures co-occur in this run; it does not establish that extra effort sustains visible output, predict how performance will change, or determine which change should take priority.	CHANGE OVER TIME Not established by this run

What this result is based on

EVIDENCE DEPTH Narrow, focused read Scope of this single run	MEASURED DIMENSIONS 6 of 6 Dimensions represented	PERSPECTIVE Senior Leader Notes do not change the score

The score and dimension values come from the submitted answers. Participant notes, when present, are shown separately and do not change the score. One run does not establish organizational savings or recoverable time. The design reference was set when the instrument was designed; it is not a comparison with customer or industry data.

INTERPRETATION BOUNDARY

This report is based on one participant's answers for the stated scope. It suggests issues to investigate and changes to test. It does not show how common these conditions are, prove their causes or predict performance. Organizational time and money estimates require separate operational measurements beyond a single run.
